

GS3 Ambulance Stretcher

The GS3 Ambulance Stretcher is designed for patient evacuation and transportation by ambulance services and hospitals.

The legs of the stretcher fold down to allow entry into an ambulance stretcher, and thereafter locks into position with the bracket (provided with product).

The GS3 is equipped with a gas spring, allowing for varied resting angles from 0 to 78 degrees. The adjustment can be done even when the patient is on the stretcher without the need to move the patient and risk further trauma.

It is also equipped with collapsible side rails to facilitate placement of patient onto the stretcher. The product comes complete with locking bracket, resting cushions and IV stand.
